

# PostgreSQL

## úvod do vývoje

... jak napsat první patch

Tomáš Vondra / EDB

[tomas.vondra@postgresql.org](mailto:tomas.vondra@postgresql.org)

Proč tenhle workshop?

# Agenda

- základní organizace vývoje
  - struktura komunity, commitfesty, nástroje
  - jaký patch napsat / udělat review?
- workflows:
  - základ: git clone, configure, make, tests, ...
  - pokročilé: CF app, github CI, buildfarm, cfbot, ...
- základy/specifika PostgreSQL kódu
  - Datum, Node, memory kontexty, error handling, ...

# Jak komunita funguje?

- vzniklo organicky a stále se vyvíjí
- není dominováno jednou firmou
  - EDB, Crunchy Data, Microsoft, Amazon, Cybertec, data egret, dbi, Dalibo, Fujitsu, Percona, ...
  - typické: firma používající Postgres interně / poskytující služby
  - pravidla proti "dominanci" jedné firmy
- core team (7 lidí, spíš takový "steering committee / BoD")
- committeři (~30 lidí, právo na commit do git repositáře)
- (major) kontributoři, ...

# Kde je komunita?

- e-mailové listy
  - postgresql-general, postgresql-performance, ...
  - postgresql-hackers (<https://www.postgresql.org/list/postgresql-hackers/>)
- IRC
  - <https://www.postgresql.org/community/irc/>
- slack, discord, ...
- konference
  - <https://www.postgresql.org/about/events/>

# Jak je vývoj strukturovaný?

- roční "major" releases (~září)
  - feature freeze in dubnu
- kvartální "minor" releases
  - bugfixy, v případě závažné chyby dříve
- commitfesty
  - cyklus: 1 měsíc práce, 1 měsíc pauza
  - "soft" pravidlo (nikdo nebrání pracovat / commitovat kdykoliv)
  - <https://commitfest.postgresql.org/>

# životní cyklus patchů

# životní cyklus (autorů) patchů

# pgsql-hackers [<https://www.postgresql.org/list/pgsql-hackers/>]

## pgsql-hackers

The PostgreSQL developers team lives here. Discussion of current development issues, problems and bugs, and proposed new features. If your question cannot likely that only a developer will know the answer, you may re-post your question in this list. You must try elsewhere first!

# CF app [<https://commitfest.postgresql.org/>]

Make it possible to add custom options to EXPLAIN	Needs review		Konstantin Knizhnik (knizhnik)		1	2023-11-02 13:07	2023-10-21 12:16
<b>Performance</b>							
More scalable multixacts buffers and locking	Needs review		Kyotaro Horiguchi (horiguti), Andrey Borodin (x4m), Ivan Lazarev (avaness)		18	2023-10-02 17:34	2023-01-11 17:13
Parallelize correlated subqueries that execute within each worker	Needs review		James Coleman (jcole1989)		11	2023-10-02 14:22	2023-07-04 01:26
In-place persistence change of a relation (fast ALTER TABLE ... SET LOGGED with wal_level=minimal)	Needs review		Kyotaro Horiguchi (horiguti)	Nathan Bossart (bossartn), Justin Pryzby (justinpryzby), Jakub Wartak (jakub.wartak.tomtom)	10	2023-10-02 11:04	2023-09-04 08:37
AcquireExecutorLocks() and run-time pruning	Needs review		Amit Langote (amitlan)	Tom Lane (tgl)	10	2023-10-02 11:03	2023-09-28 08:26
Speed up releasing of locks	Needs review		Andres Freund (andresfreund), David Rowley (davidrowley)	Heikki Linnakangas (heikki)	10	2023-10-02 11:04	2023-11-09 16:18
nbtree performance improvements through specialization on key shape	Needs review		Matthias van de Meent (mmeent)	David Christensen (davidchristensen)	8	2023-10-02 11:05	2023-10-30 16:19
Add sortsupport for range types and btree_gist	Needs review		Christoph Heiss (christoph.heiss)		8	2023-10-02 09:45	2022-11-30 17:25
Improve dead tuple storage for lazy vacuum	Waiting on Author		Masahiko Sawada (masahikosawada), John Naylor (john.naylor)		8	2023-10-02 10:56	2023-10-28 08:56
Reducing planning time when tables have many partitions	Waiting on Author		Yuya Watari (watari)	Thom Brown (thom), Ashutosh Bapat (ashutoshbapat), Andrei Lepikhov (lepikhov)	8	2023-10-02 10:56	2023-09-27 07:28
ALTER TABLE and CLUSTER fail to use a BulkInsertState for toast tables	Waiting on Author	17	Justin Pryzby (justinpryzby)		7	2023-11-07 16:17	2023-11-07 16:17
Reduce timing overhead of EXPLAIN ANALYZE using rdtscc	Needs review	16	Andres Freund (andresfreund), Lukas Fittl (lfittl), David Geier (geidav)	Lukas Fittl (lfittl), Hannu Krosing (hannukrosing)	7	2023-10-02 11:05	2023-02-20 10:36
asynchronous execution support for Custom Scan	Needs review		KaiGai Kohei (kaigai), kazutaka onishi (onishi)		7	2023-10-02 09:46	2022-12-01 23:35
Add semi-join pushdown to postgres_fdw	Needs review		Alexander Pyhalov (a.pyhalov)	Yuki Fujii (fujiiyuki)	7	2023-10-02 11:05	2023-10-31 11:07

# buildfarm [<https://buildfarm.postgresql.org>]

## PostgreSQL BuildFarm Status

Shown here is the latest status of each farm member for each branch it has reported on in the last 30 days.

Use the farm member link for history of that member on the relevant branch.

Legend	= cassert	= debug	= gssapi	= krb5	= llvm	= meson	= nls	= openssl
	= pam	= perl	= python	= tap-tests	= tcl	= thread-safety	= vpath	= xml

## Backend Flowchart

Click on an item to see more detail or look at the full **index**.

# základy práce

- autotools
  - configure + make
  - configure --help
  - doporučené: ccache
- meson (cmake)
  - novější build systém
  - neumí všechno

# git clone

```
git clone https://github.com/postgres/postgres.git
```

 completed	prefetch -o- fd74085	Repository postgres	Owner tvondra	Branch index-insert-prefetch	14:36
 completed	PoC prefetch for IOS -o- 766a41d	Repository postgres	Owner tvondra	Branch index-prefetch-v6	22:28
 completed	index prefetch v6 -o- 8659787	Repository postgres	Owner tvondra	Branch index-prefetch-v6	15:14
 completed	test_decoding: Remove unnecessary table in twophase test -o- 98e8974	Repository postgres	Owner tvondra	Branch master	14:13

# configure

```
configure --help
```

```
configure --prefix=$HOME/pgbuild \  
  --enable-depend \  
  --enable-tap-tests --enable-cassert \  
  --with-lz4
```

# make targets

make

make -s -j4 install

make (check | installcheck)

make check-world

make html

make coverage

# Typy testů

## regresní testy

- jednoduchý SQL skript + očekávaný výstup

## izolační testy

- interakce více sessions (ACID, ...)

## TAP testy

- složitější skripty
- replikace, pg\_dump, pg\_upgrade

## Valgrind

idiomy

# Datum

- abstraktní datový typ
  - nechceme být omezeni/navázáni na C datové typy
  - SQL má jiné datové typy než C
  - chceme umožnit rozšiřitelnost
  - nechceme závislost na 32/64 bitech (změna rozsahů)
- hodnota nebo pointer
  - až 8B hodnotou (64bit platformy)
  - pointer delší a variable-length hodnoty

# PG\_FUNCTION\_ARGS

- volací konvence
- opět, nechceme být omezeni C (a máme jiné datové typy)
- chceme polymorfismus, default hodnoty, NULL (SQL), ...

Datum

```
random_integer(PG_FUNCTION_ARGS)
{
    PG_RETURN_INT32(42);
}
```

# Memory management

- nechceme dělat malloc/free
- museli bychom sledovat všechny alokace (jinak memleak)
- MemoryContext
  - objekt / struktura která seskupuje alokace
  - ideálně alokace se stejnou životností, pro danou oblast kódu
  - lze uvolnit / resetovat jako celek (uvolní všechny alokace)
  - současně cache (malloc může být celkem pomalý)
- efektivní obrana proti memory leakům
- hierarchie memory contextů (top => transakce => request => ...)

# Node [src/include/nodes/...]

- systém C struktur, v podstatě třídy
- abstrakce, umožňující polymorfismus
- Node je "base class" a všichni z toho dědí

```
typedef struct Node
{
    NodeTag    type;
} Node;
```

```
typedef struct Query
{
    NodeTag    type;
    ...
    Node      *utilityStmt;
    ...
}
```

# Error handling

- **eelog**
  - jednodušší na použití
  - primárně "shouldn't happen" případy
  - bez podpory pro překlady
- **ereport**
  - složitější, různé vychytávky (hinty, detaily, SQL errcode, ...)
  - podpora pro překlady
- **PG\_TRY / PG\_CATCH / PG\_END\_TRY / PG\_RE\_THROW**
  - víceméně výjimky
  - schopnost reagovat na chyby

DEMO

# jednoduchá extenze

- generování random integerů
  - volací konvence SQL funkcí, Datum

# jednoduchá extenze

- generování random integerů
  - volací konvence SQL funkcí, Datum
- generování random stringů
  - alokace paměti apod.

# jednoduchá extenze

- generování random integerů
  - volací konvence SQL funkcí, Datum
- generování random stringů
  - alokace paměti apod
- memory kontext
  - vlastní memory kontext, statistiky, uvolnění

# jednoduchá extenze

- generování random integerů
  - volací konvence SQL funkcí, Datum
- generování random stringů
  - alokace paměti apod
- memory kontext
  - vlastní memory kontext, statistiky, uvolnění
- hook / callback
  - jednoduchý executor callback

inspirace

# jak vymyslet jaký patch psát?

- ideálně něco co zajímá / trápí vás
  - potřebujete to v práci, osobní zájem, ...
  - např. pomalý dotaz => vymyslím jak udělat rychleji
- projděte patche v CF aplikaci
  - review na existující patch, pomoc autorovi, související patch, ...
- coverage report
  - části mají nízkou coverage - napíšu pár testů, najdu/opravím chyby
- konkrétní příklad
  - zkusit memory contexty přepnout čistě na mmap()
