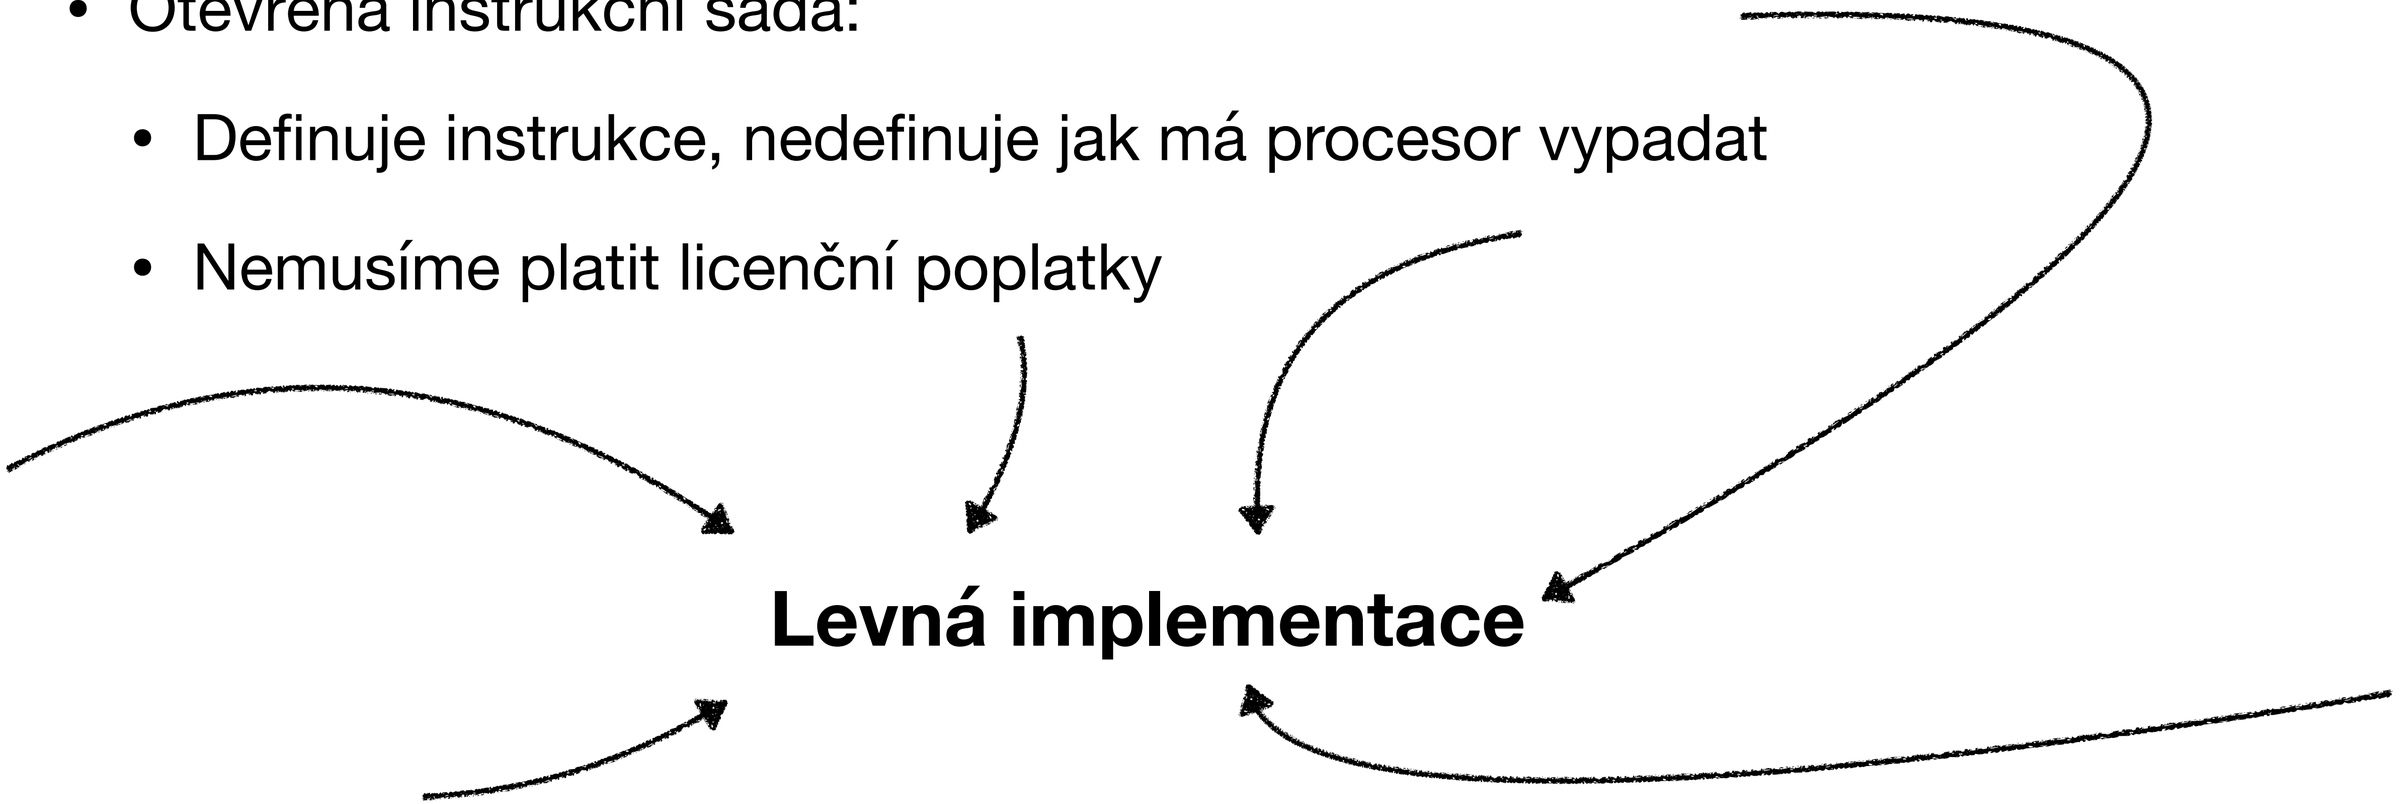
RISC-V - Aneb proč se nebát pochopit moderní architekturu

Filip Szkandera 2025

RISC-V obecně

- Relativně “nová” - vyvinuta v roce **2014** v Berkley
- Otevřená instrukční sada:
  - Definuje instrukce, nedefinuje jak má procesor vypadat
  - Nemusíme platit licenční poplatky



RISC

- RISC - **Reduced** Instruction Set Computer
  - RISC - Designová filozofie
  - RISC-V - Specifická implantace založená na filozofii RISCu

VS

CISC

- CISC - **Complex** Instruction Set Computer

Co se vlastně redukovalo?

Proč by se to jinak jmenovalo “redukovaná sada”?

- Procesory s “redukovanou” sadou **nejsou “hloupější”**, ale **optimalizovanější**
- Instrukce no-op může být u RISC architektury separátní instrukce
- U RISC-V se no-op enkóduje jako operace sčítání:
  - Přičteme nulu k nule [add zero, zero, zero]

Instrukční sady

Pro 32-bitovou architekturu

- Základní instrukční sada: **RV32I**
- Můžeme přidat rozšiřující instrukční sady pro různé funkce
- Některé z nich jsou “frozen”, jiné se ještě mohou změnit

Rozšiřující sady

M	Multiplication
A	Atomics
F	Floating point
B	Bit manipulation
V	Vector operations
C	Kompresované instrukce

RV32I instrukce

- Spousta instrukcí sdílí společné sekce:
  - rs1, rs2 a rd jsou vždy na stejném místě
  - Immediate instrukce se “snaží” mít co nejvíce stejných bitů na stejné pozici

		31 25	24 20	19 15	14 12	11 7	6 0

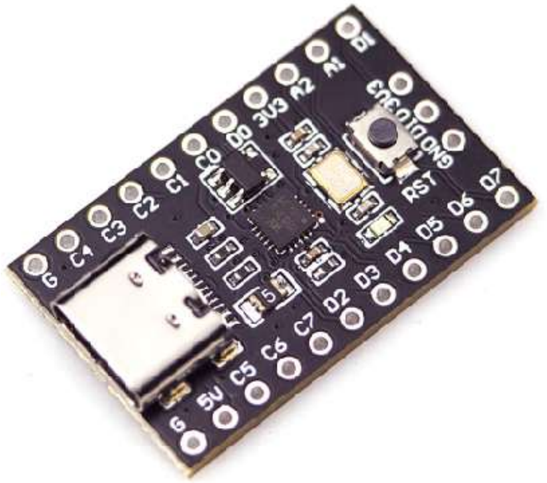
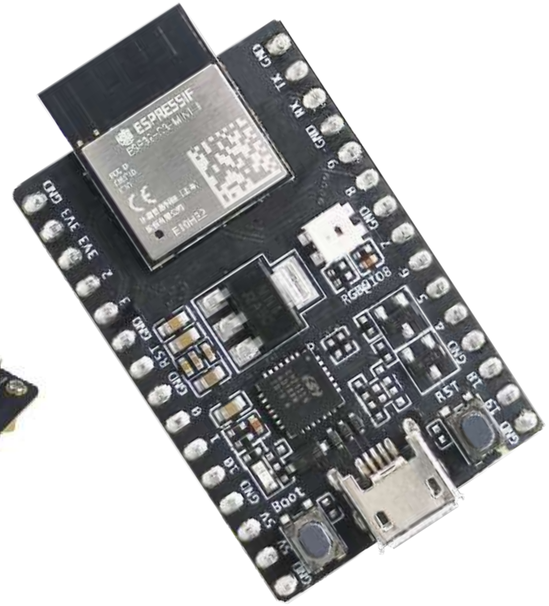
Kde jej můžeme najít

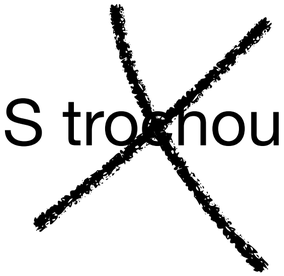
- Mikroprocesory:
  - (WCH) - CH32V003
  - (Espressif) - ESP32-C3, ESP32-H2, …
- SBC, počítače:
  - (SiFive) - SiFive Unmatched





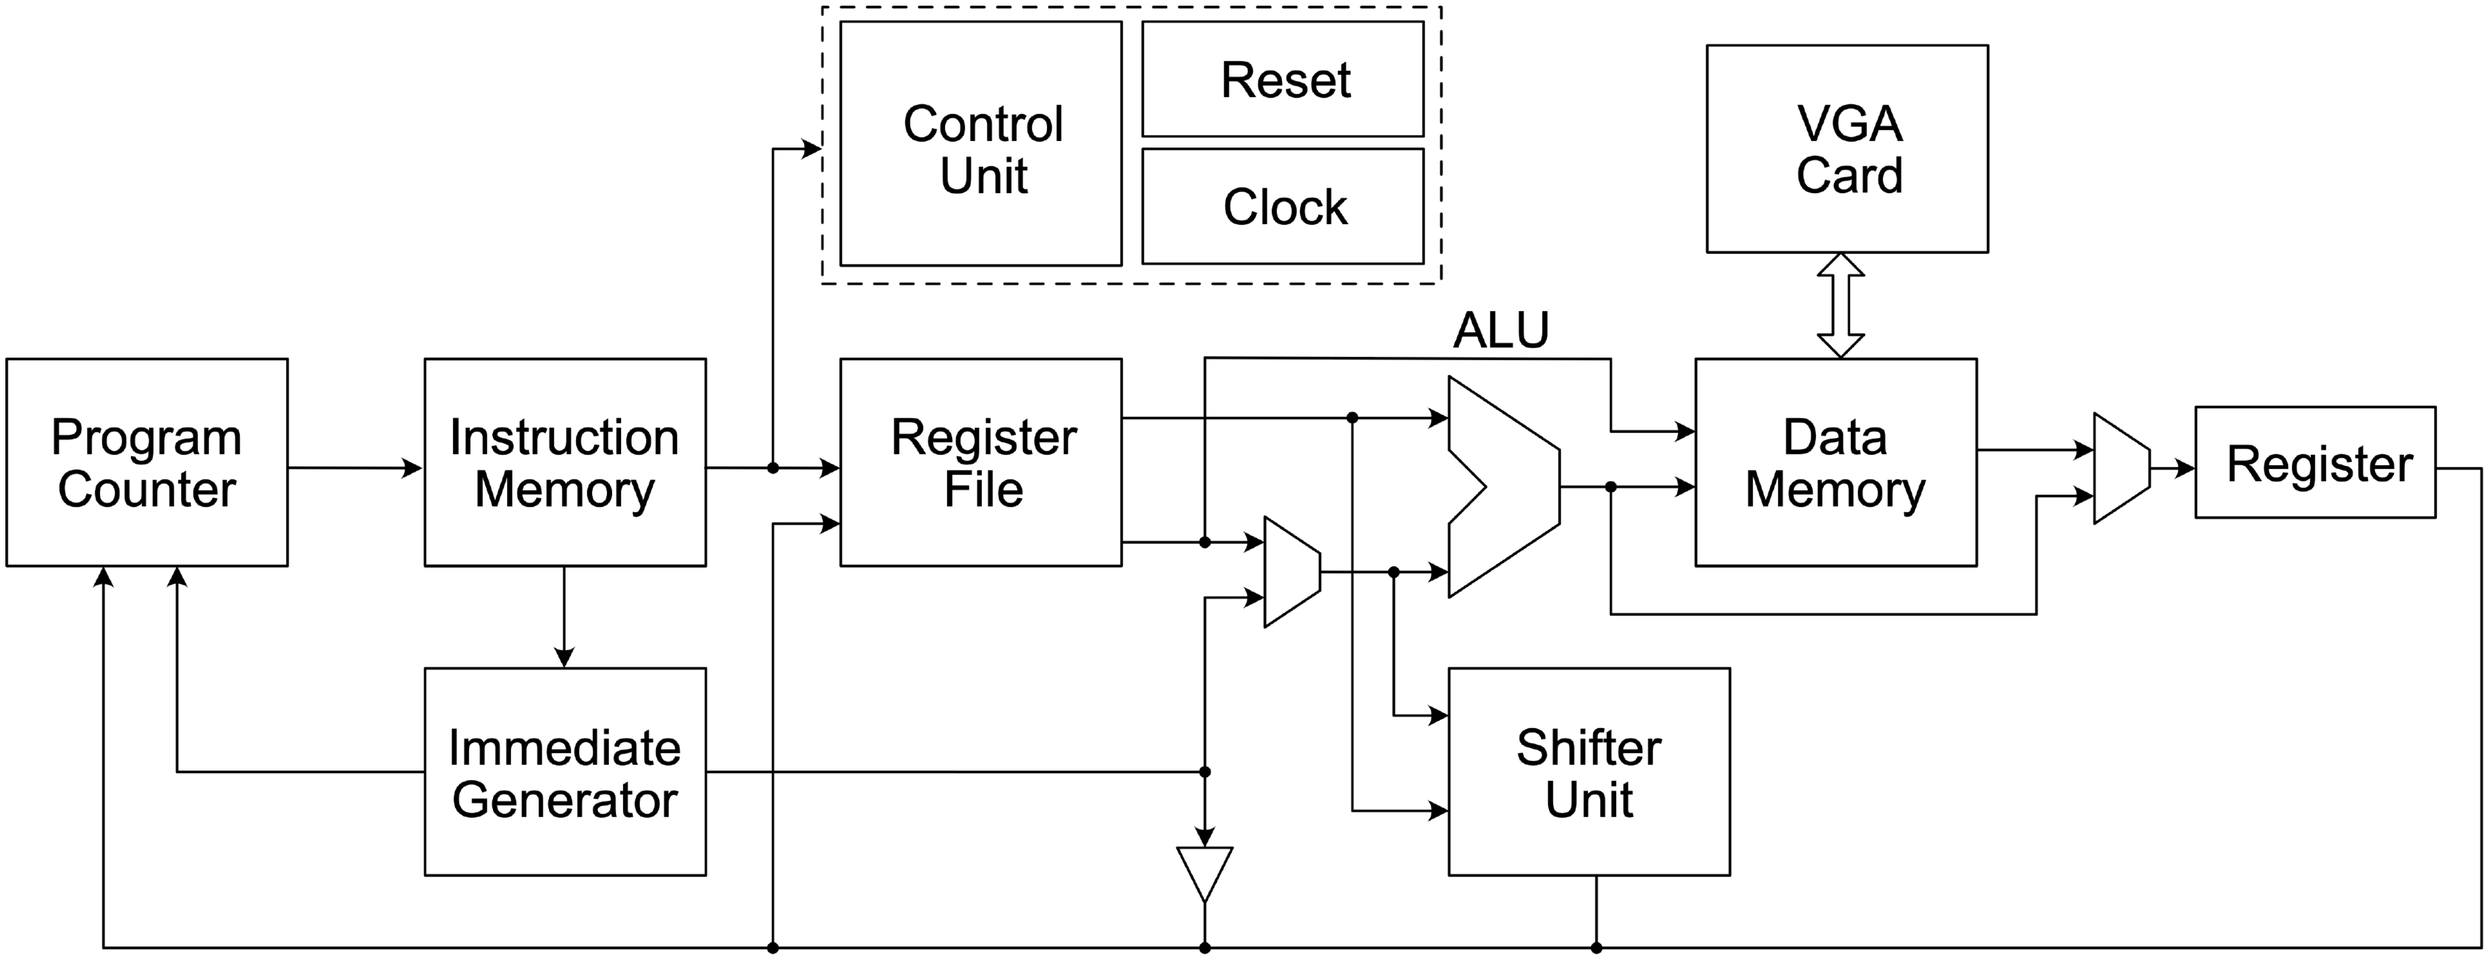
https://nuttx.apache.org/docs/latest/platforms/risc-v/esp32c3-legacy/boards/esp32c3-devkit/index.html
https://www.cnx-software.com/wp-content/uploads/2023/02/Cheap-CH32V003-RISC-V-development-board.jpg
https://external-content.duckduckgo.com/iu/?u=https://www.phoronix.net/image.php?id=sifive-riscv-unmatched&image=sifive_unmatched_1_show&f=1&nofb=1&ipt=4a43dd67e9ca47807e7de19a1061cd023b6cf4c8a5207e8481951063b2e5cd07

Lze si postavit vlastní RISC-V?

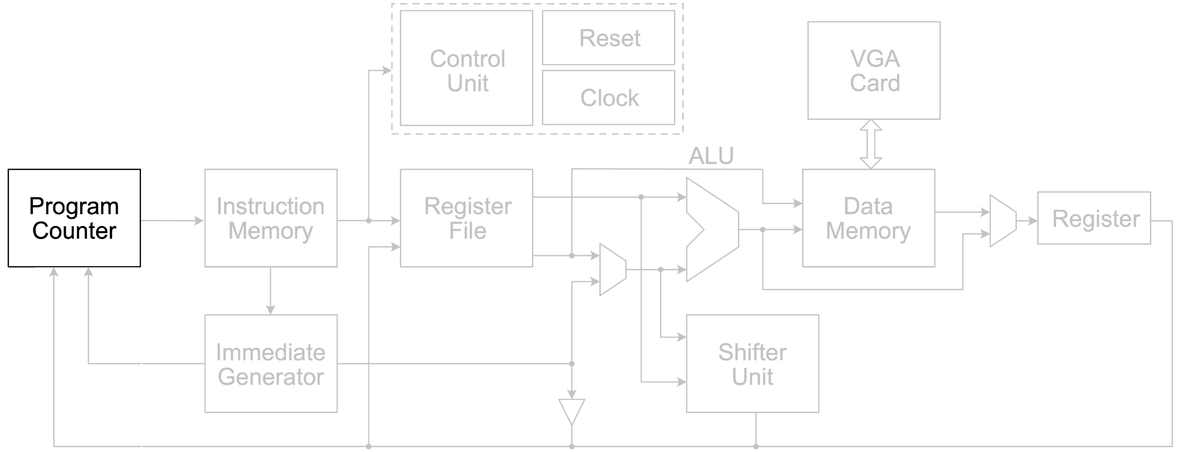


S trochou trpělivosti….

Blokový diagram

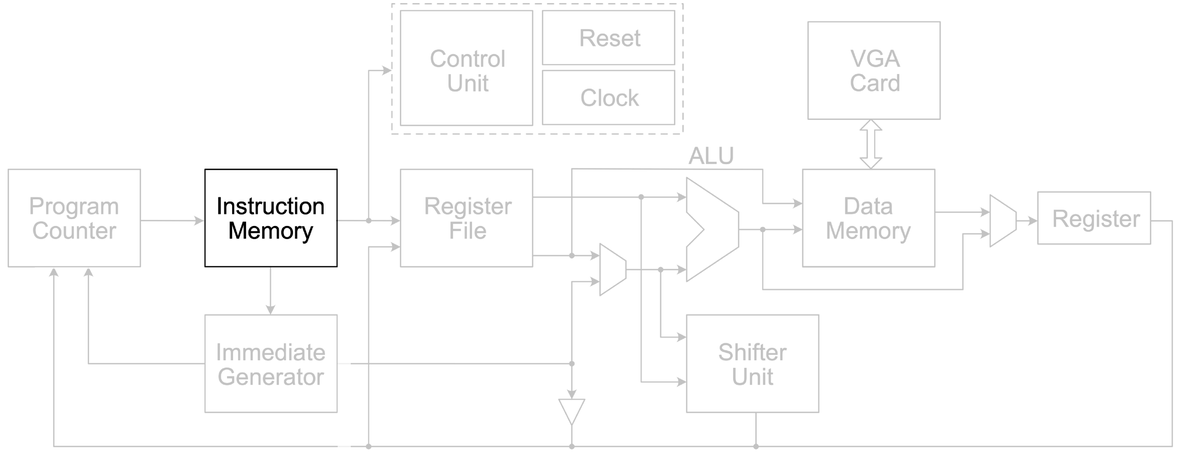


Program Counter

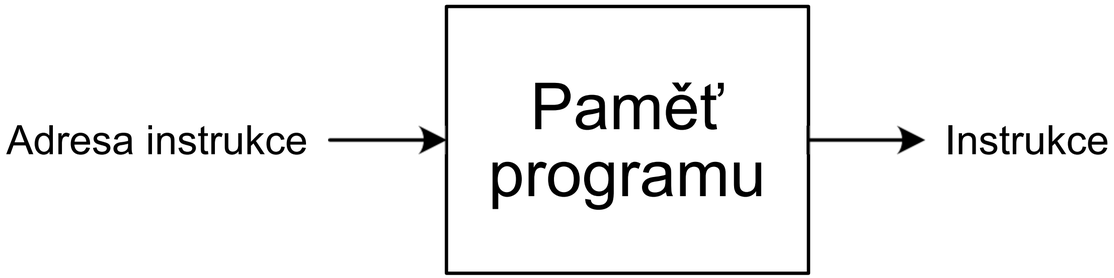


- Uchovává adresu právě vykonávané instrukce
- Obsahuje “malou ALU” pro výpočet:
  - Nadcházející instrukce (+ 4)
  - Skoku [jal, jalr]

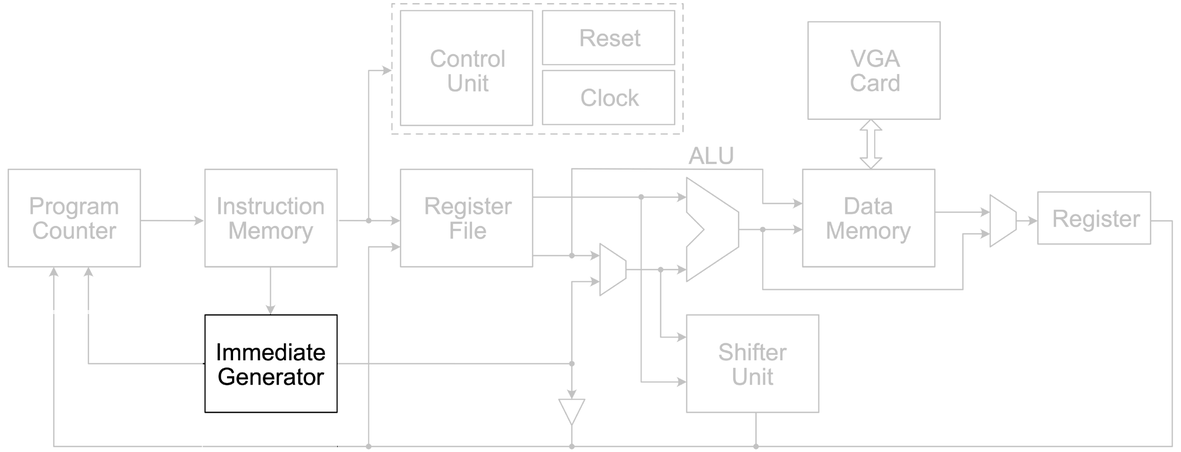
Instruction Memory



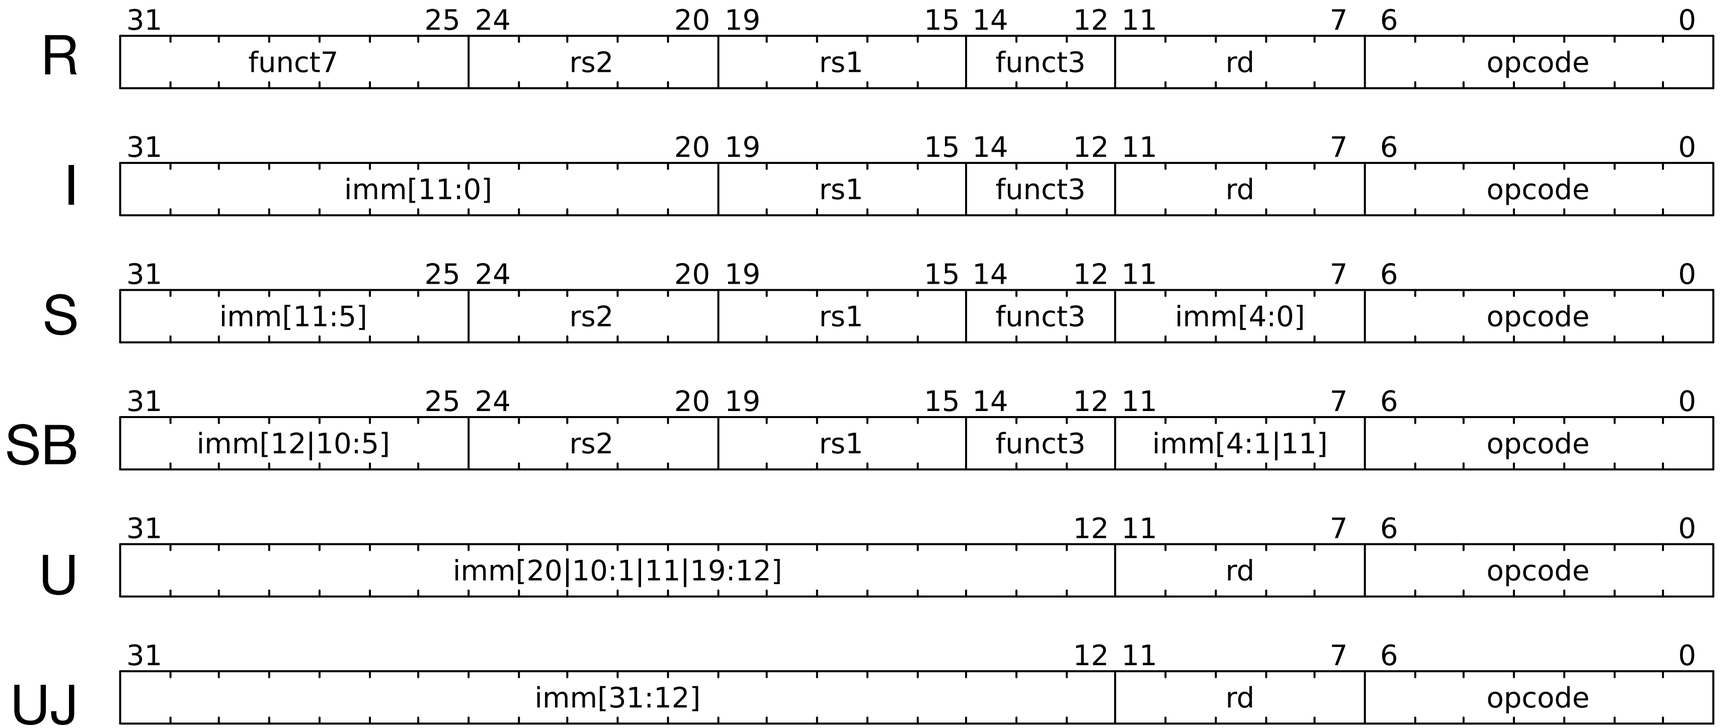
- Paměť instrukcí - uchovává celý program
- Sestavená z EEPROM pamětí (“non volatile”)



Immediate Generator

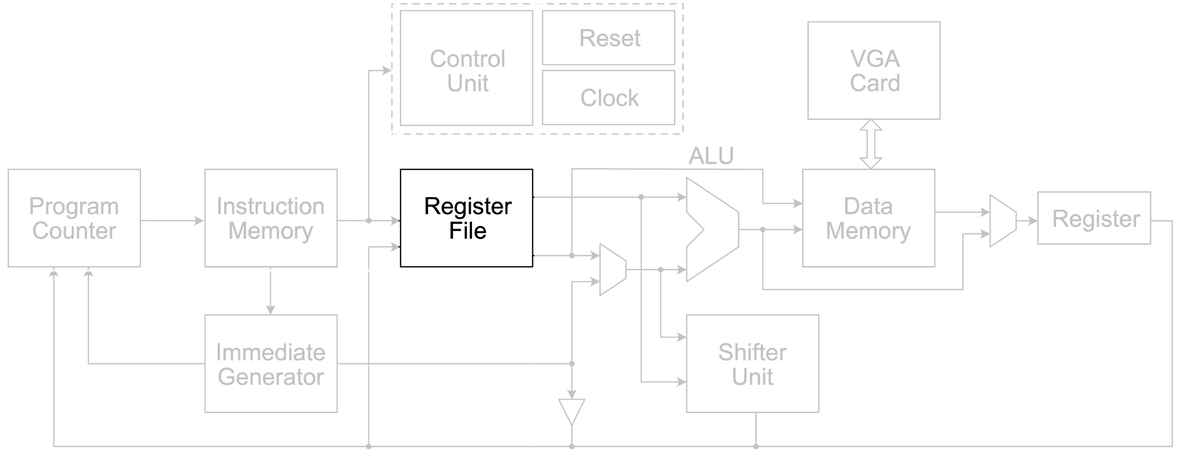


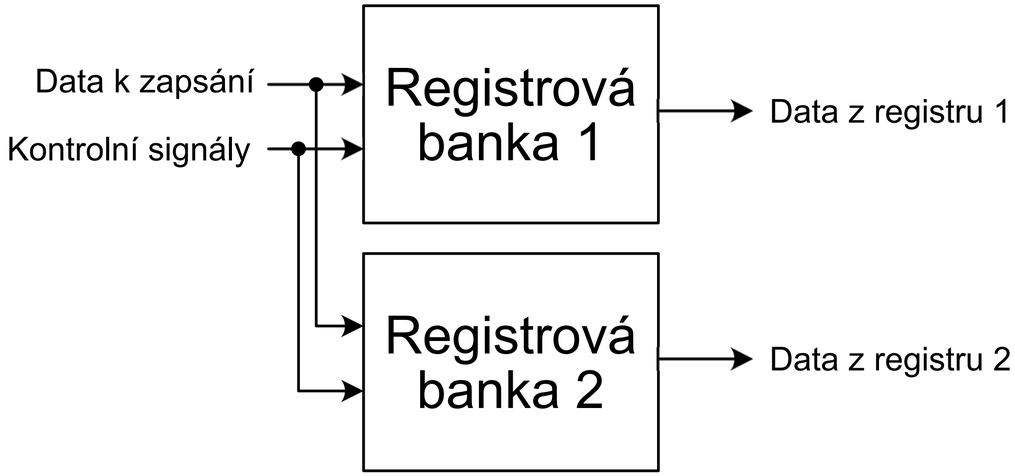
- “Vytahuje” konstanty z instrukce dle formátu;



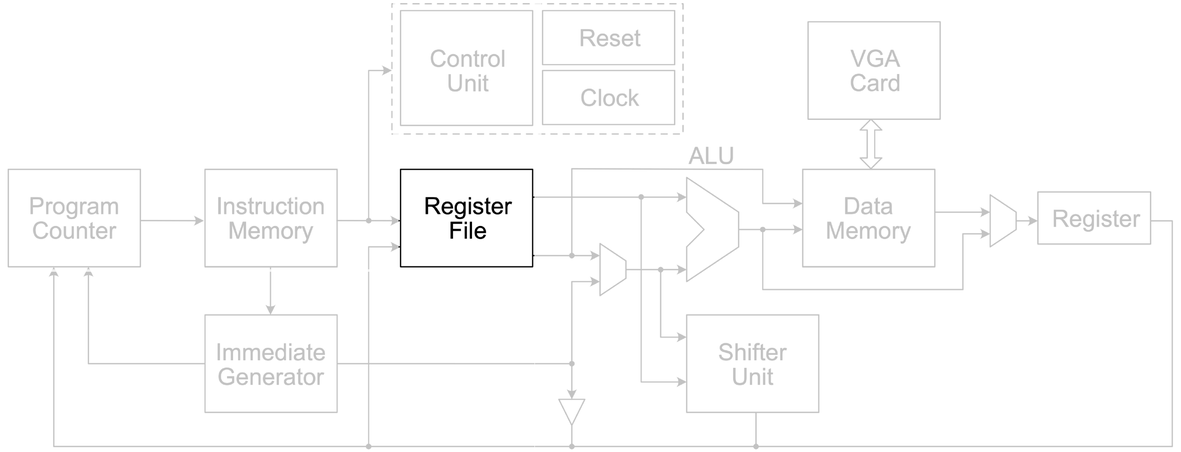
Register File

- Uchovává 32 registrů (po 32 bitech)
- Můžeme vyčítat až dva registry v jednu chvíli nezávisle
- Všechny registry jsou identické, s výjimkou registru x0
- Některé registry jsou předurčené specifickému použití, není to však HW zajištěno





Register File



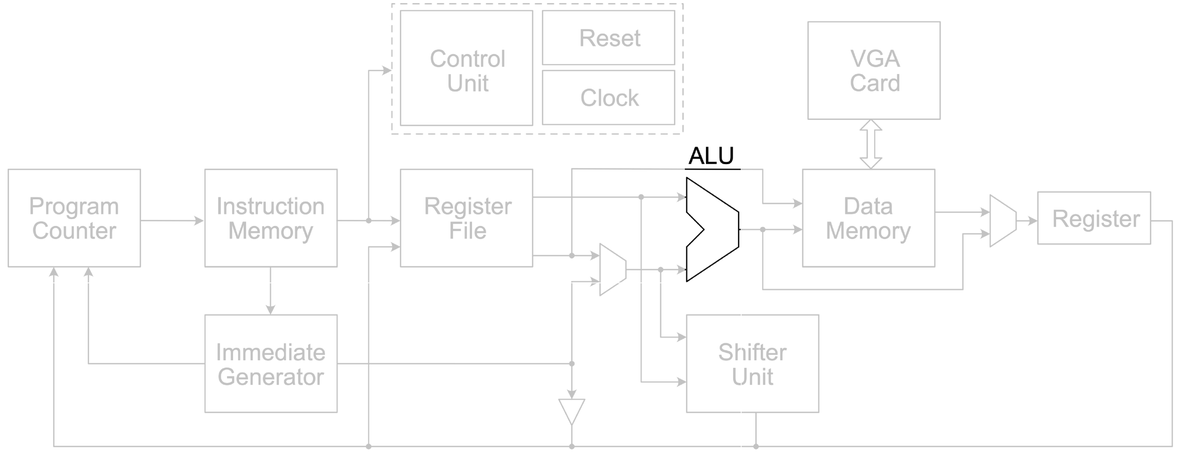
Výpis registrů (RV32I):

x0	Zero
x1	Return address
x2	Stack pointer
x3	Ground pointer
x4	Thread Pointer
x5	Temporary 0
x6	Temporary 1
x7	Temporary 2
x8	Save 0
x9	Save 1
x10	Function argument / return value 0
x11	Function argument / return value 1
x12	Function argument / return value 2
x13	Function argument / return value 3
x14	Function argument / return value 4
x15	Function argument / return value 5

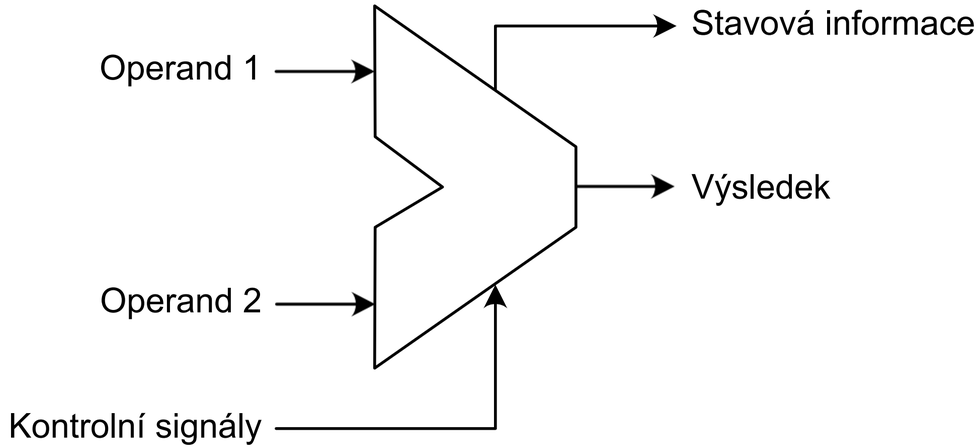
x16	Function argument / return value 6
x17	Function argument / return value 7
x18	Save 2
x19	Save 3
x20	Save 4
x21	Save 5
x22	Save 6
x23	Save 7
x24	Save 8
x25	Save 9
x26	Save 10
x27	Save 11
x28	Temporary 3
x29	Temporary 4
x30	Temporary 5
x31	Temporary 6

ALU

Aritmeticko - logická jednotka



- Řeší aritmeticko-logické problémy a podmínky (branch)
- Řeší podmínky (například pro podmíněné skoky)

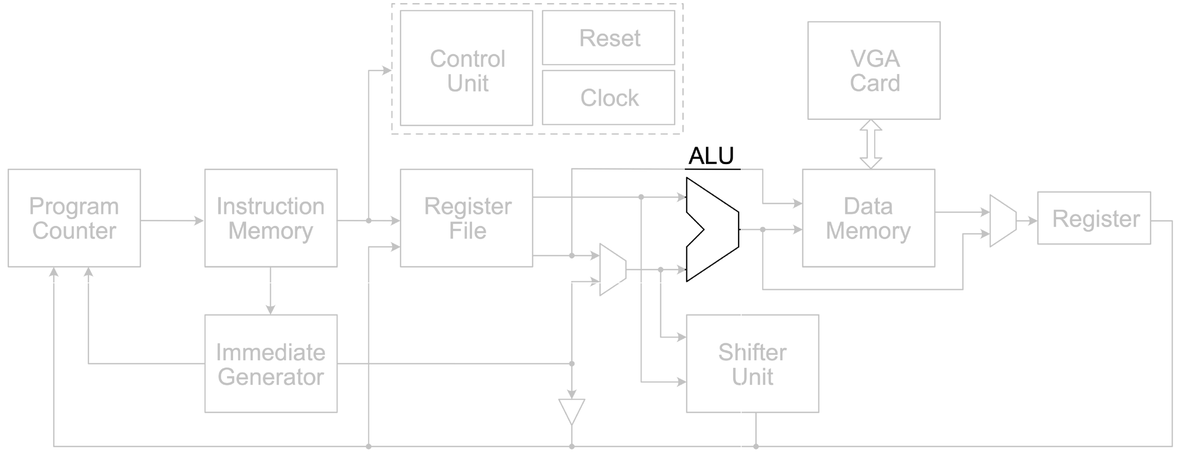


Aritmeticko-logické instrukce

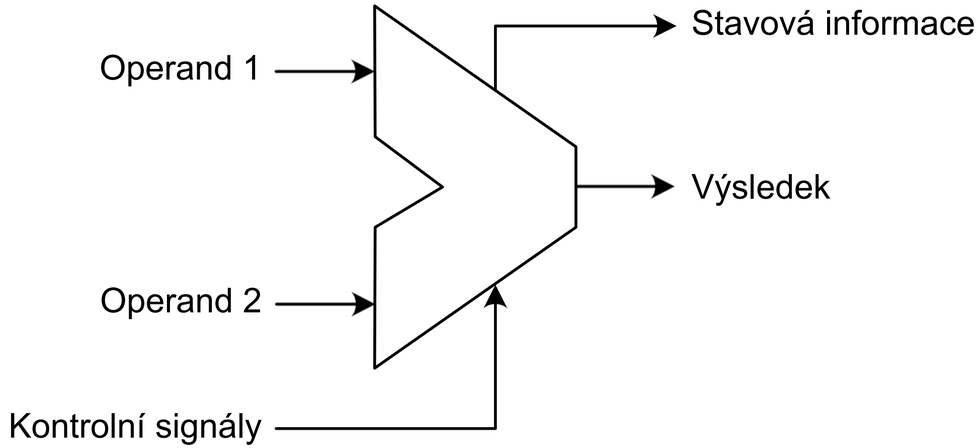
add	Addition
addi	Addition (of immediate value)
sub	Subtraction
sll	Shift left logical
slli	Shift left logical (by immediate value)
xor	XOR
xori	XOR (with immediate value)
srl	Shift right logical
srli	Shift right logical (by immediate value)
sra	Shift right arithmetic
srai	Shift right arithmetic (by immediate value)
or	OR
ori	OR (with immediate value)
and	AND
andi	AND (with immediate value)

ALU

Aritmeticko - logická jednotka



- Řeší aritmeticko-logické problémy a podmínky (branch)
- Řeší podmínky (například pro podmíněné skoky)



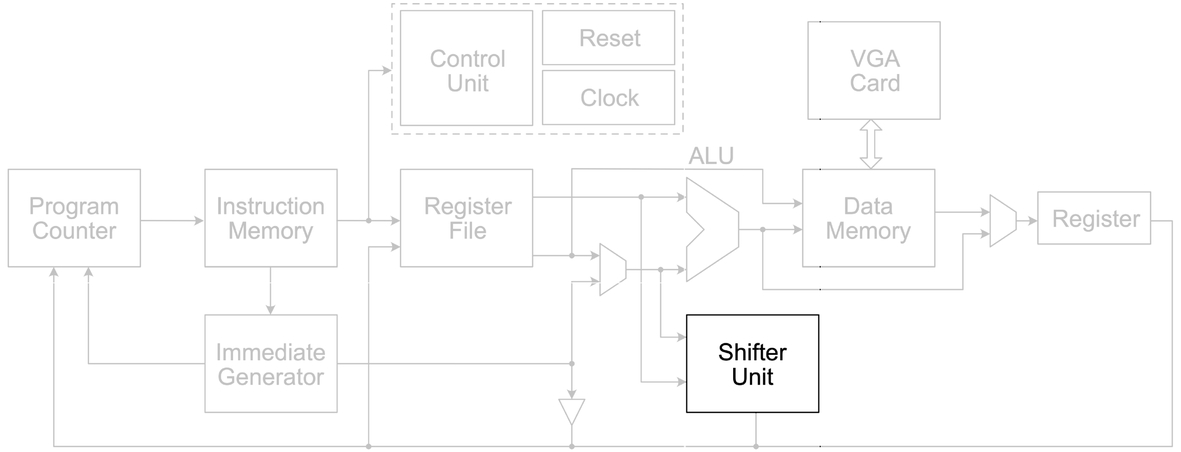
Podmíněné skoky

beq	branch (if) equal
bne	branch (if) not equal
blt	branch (if) less than
bge	branch (if) greater (or) equal
bltu	branch (if) less than unsigned
bgeu	branch (if) greater (or) equal unsigned

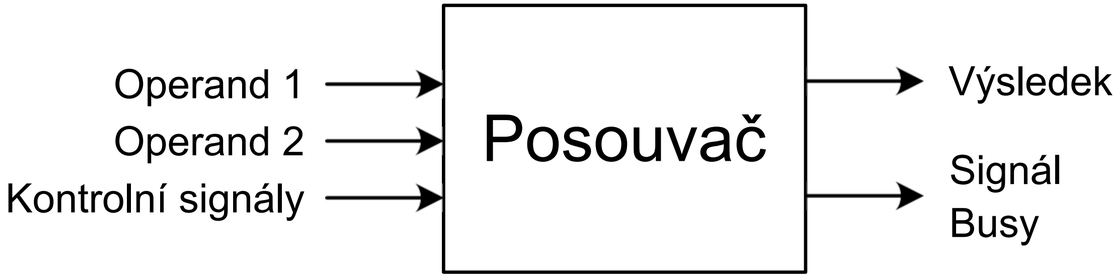
Nastavovací instrukce

slt	Set (if) less then
slti	Set (if) less then (immediate)
sltu	Set (if) less then (unsigned)
sltiu	Set (if) less then (immediate, unsigned)

Shifter Unit



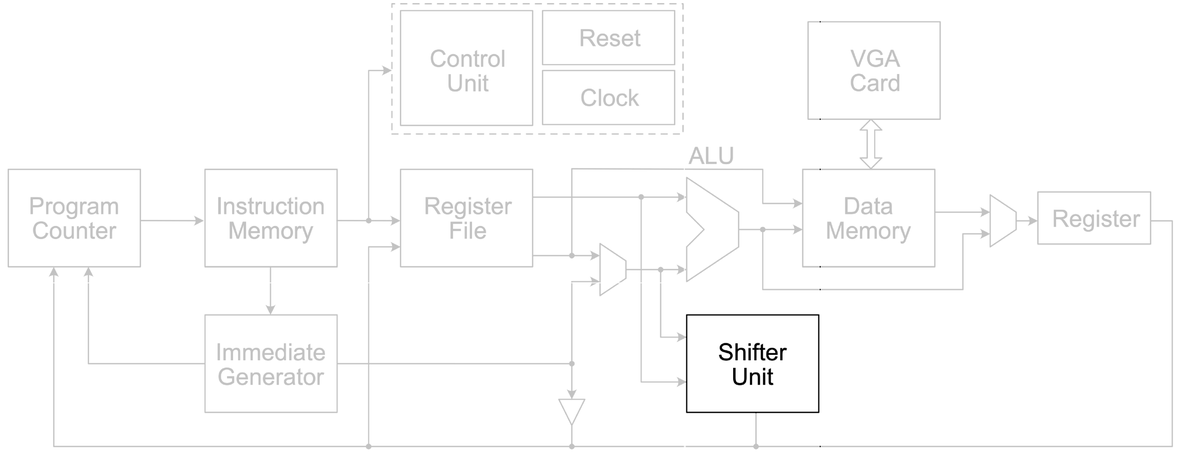
- Posouvá operand o danou hodnotu:
  - Doprava (aritmeticky / logicky)
  - Doleva (pouze logicky)



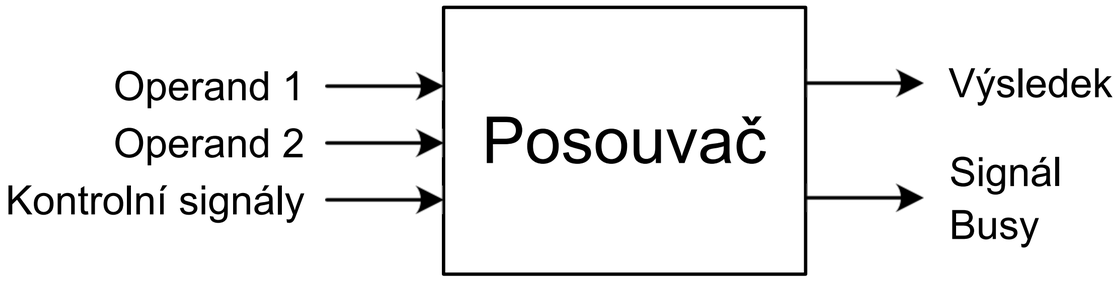
Aritmeticko-logické instrukce

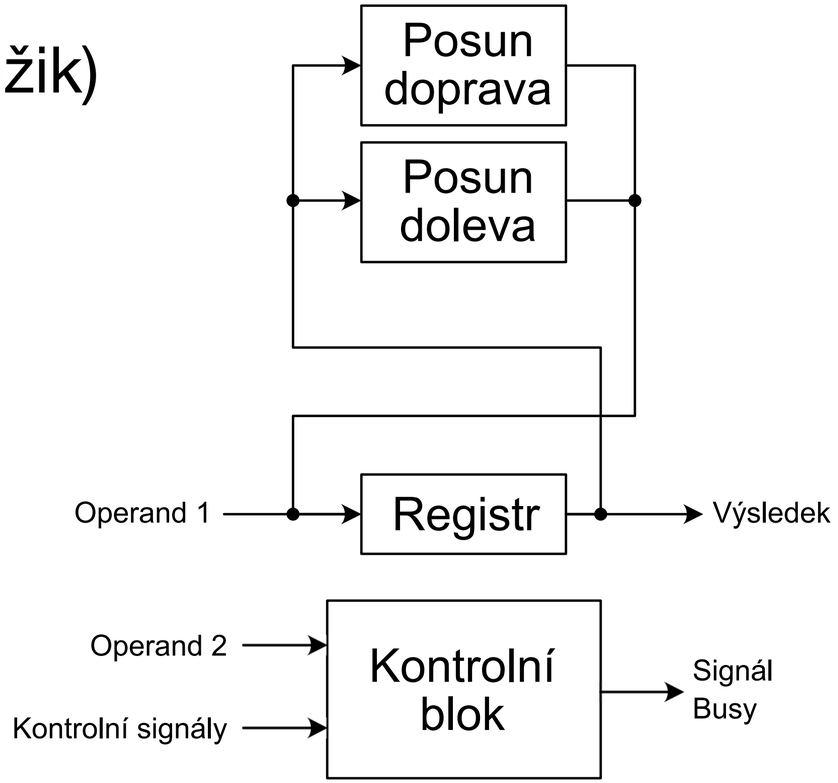
add	Addition
addi	Addition (of immediate value)
sub	Subtraction
sll	Shift left logical
slli	Shift left logical (by immediate value)
xor	XOR
xori	XOR (with immediate value)
srl	Shift right logical
srli	Shift right logical (by immediate value)
sra	Shift right arithmetic
srai	Shift right arithmetic (by immediate value)
or	OR
ori	OR (with immediate value)
and	AND
andi	AND (with immediate value)

Shifter Unit

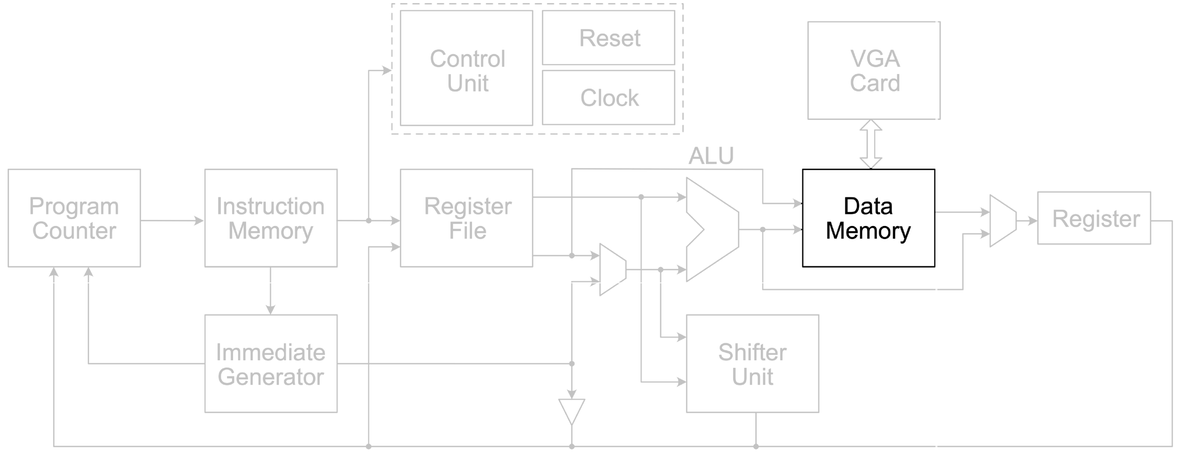


- Dvě možnosti implementace:
  - Paralelní (celá operace se vykoná v jeden okamžik)
  - Postupná (postupně posouváme o 1)

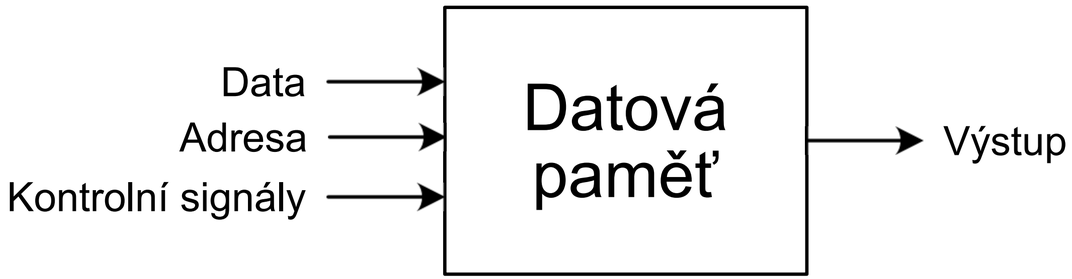




Data Memory



- Ukládá data do paměti (dle sektoru)
- Můžeme pracovat s byty (8 bit), půlslovem (16 bit) a slovem (32 bit)
- Byte steering logic - ukládaný byte můžeme “přesunout” na 3 další pozice

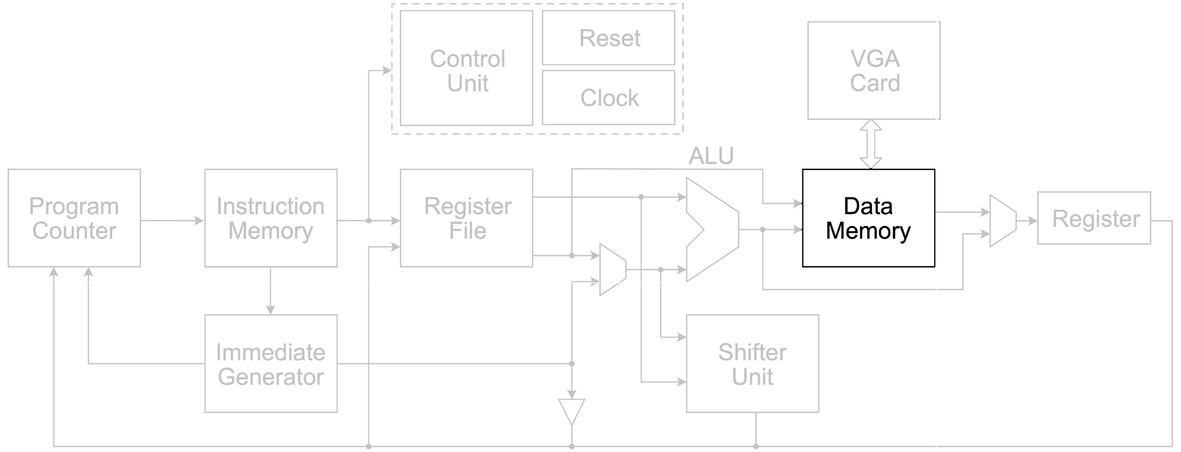


Paměťové instrukce

lb	load byte
lbu	load byte unsigned
lb	load byte
lhu	load half unsigned
lw	load word
sb	store byte
sh	store half
sw	store word

Data Memory

- Speciální rozsahy - RAM, V-RAM, SR



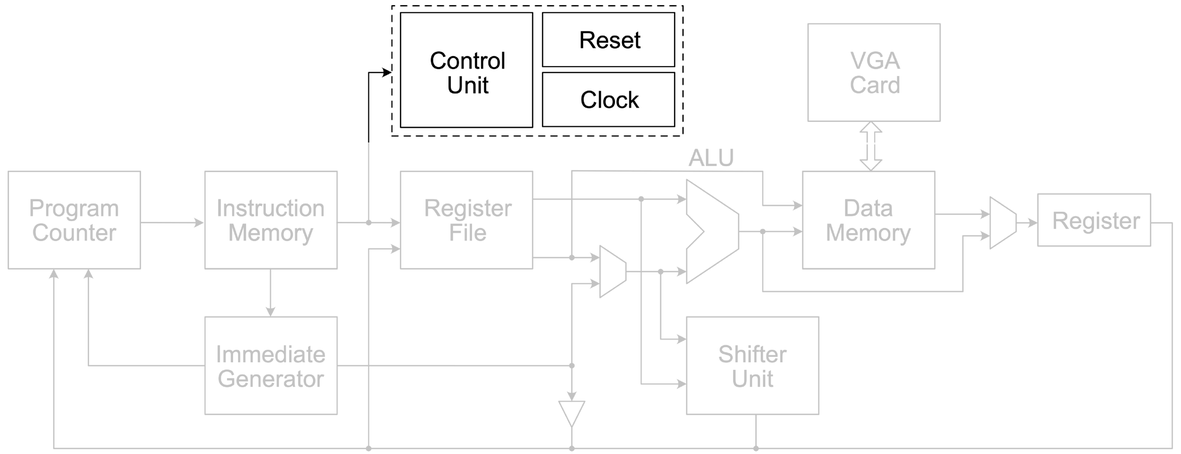
Speciální registry

Adresa [hex]	Vstup/Výstup	Popis
0x80000000	Výstup	Displej
0x80000001	Výstup	VGA_Enable
0x80000004	Vstup	Port A
0x80000005	Vstup	Port B
0x80000006	Výstup	Port C
0x80000007	Výstup	Port D

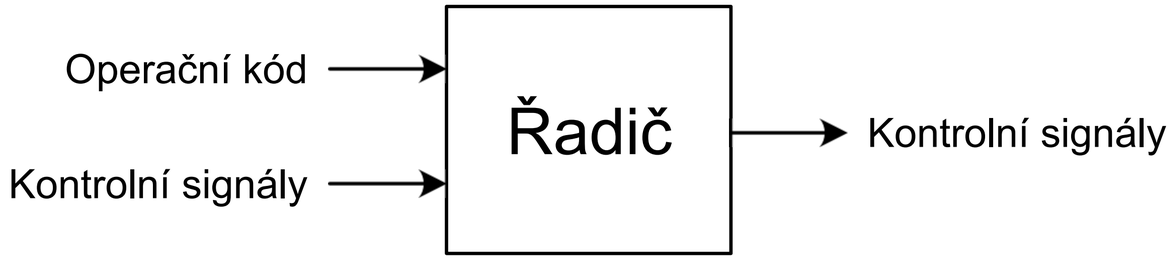
Rozsahy paměti

Adresový rozsah	Typ
0x00000000 ... 0x0001FFFF	RAM
0x00020000 ... 0x3FFFFFFF	Rezervovaný prostor
0x40000000 ... 0x400007FF	V-RAM
0x40000800 ... 0x7FFFFFFF	Rezervovaný prostor
0x80000000 … 0x8000000F	Speciální Registry
0x80000010 ... 0xFFFFFFFF	Rezervovaný prostor

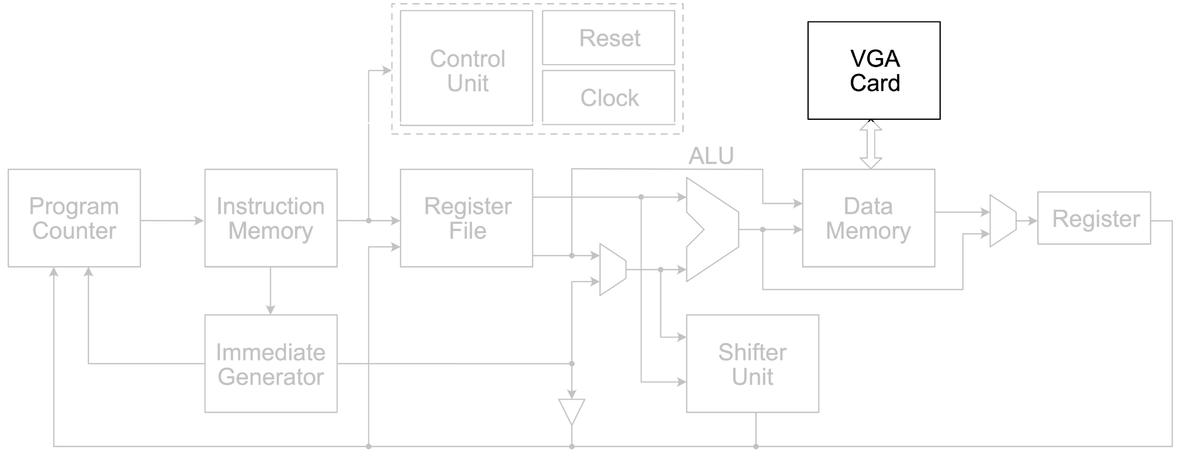
Control Unit



- Generuje kontrolní signály v závislosti na op-kódu z každé instrukce
- Mikroinstrukce - Risc-V procesory by je technicky neměly potřebovat



VGA Card



- Generuje VGA signál
- Používá dual-port paměti pro display-buffer
- 200 x 150px, pouze černobílé
